UK Visa Status: Student Visa. Eligible for Graduate Visa (2 Years Full Working Rights)

STATEMENT

AI Engineer with 3 years of industry experience designing, building and deploying production AI systems: **LLM applications**, **agentic tool-calling** workflows and **RAG** services delivered through **FastAPI** APIs and microservices, with data pipelines and **Docker CI/CD** deployment on **AWS**. Worked directly with business stakeholders in regulated financial services, from requirements to release and iteration. Co-built a scoring and ranking tool with a **RAG** assistant for an MSc in Data Science dissertation with AstraZeneca (University of Bristol), refined with scientist feedback, and studied **LSTM** and attention sequence models. Acted as de facto team lead for up to 4 interns and was twice recognised with Best Team Project (2024, 2025).

EDUCATION

University of Bristol – MSc. Data Science (awaiting result) September 2025 – September 2026
NMIMS B.Tech Information Technology (Dual Degree) June 2017 – April 2022
NMIMS MBA Technology Management (Dual Degree) June 2017 – April 2022

WORK EXPERIENCE

HDFC Asset Management Company Ltd. July 2022 – July 2025

AI Solutions Engineer / Forward Deployed Engineer

AI Engineering & Agentic Systems

- Designed and built **LLM applications** end to end (**ReactJS** frontend, **Python FastAPI** microservices, **RAG** with **LlamaIndex** and **Azure OpenAI** GPT-3.5 & **Llama-3**) for Compliance, Client Service and Investment, with **Azure OpenAI embeddings** and a separate **pgvector** database per department so each team searched only its own internal documents.
- Built **tool-calling** agents that call **Python** functions as tools to run **SQL**-backed fund comparisons and generate PDF reports on request, served to the frontend through the **FastAPI** microservices; guided behaviour with **system prompts**, versioned every prompt change in **Git** and had the **Compliance** department review each release.
- Weighed cost against quality when choosing models: **self-hosted Llama-3** on a **GPU EC2** instance for the largest department and the stronger **Azure OpenAI** outputs for decision makers; released prototypes to real users and changed the applications based on what they found.

Production Services, Pipelines & Reliability

- Turned prototypes into deployable tools: packaged the **FastAPI** microservices (**uvicorn**) as **Docker** containers on **AWS** (**EC2**, **ECR**, **Lambda**) and automated deployment of the separate frontend and backend repositories (dev and prod) through a one-click **Jenkins** and **GitLab CI/CD** pipeline.
- Scheduled the daily rating-email pipeline as a batch job on **AWS SageMaker**, started by an **EventBridge** rule that triggers a **Lambda** function at 9 AM, separate from the user-facing services.
- Protected the internal applications with **RBAC** using a **Python** authentication function against the company **LDAP** server and **AWS Security Groups** limiting access to company private IPs; deployed an **Nginx** reverse proxy, one of the fixes that took the applications from repeatedly failing to passing the security team's **VAPT**.

Data, Analytics & Stakeholder Delivery

- Designed a **Normalized SQL Schema** (**PostgreSQL**) and wrote **Python** ingestion scripts for the **Morningstar API** covering every fund in the Indian mutual fund market (2023–2025), refreshed fortnightly and monthly and integrated with legacy analyst data; developed **Optimized SQL** queries, **Functions** and **Procedures**.

- Built a **Python** extraction pipeline that parses over **300** daily emails from credit rating agencies into structured data, **fuzzy-matches** company names against the ones analysts track and sends a daily summary, **saving 60 analyst hours a month**; replaced **AWS Textract** with **Azure OpenAI** when a rating agency began sending emails as images.
- Analyzed customer data using **Python Pandas** and **Market Basket Analysis** (**Apriori** Algorithm) to identify buying patterns, handing the insights to the marketing team; migrated financial analysts from Excel to **Power BI** dashboards, improving efficiency by **10 hours a week**.
- Worked directly with business stakeholders in Client Service, Compliance and Investment to gather requirements, demonstrate tools and turn feedback into releases; acted as de facto team lead for up to 4 interns in my final year; recognised with Best Team Project twice (2024 rating-email automation, 2025 department RAG chatbot).

PROJECTS

- **University of Bristol MSc. Data Science Dissertation in partnership with AstraZeneca:** CellLineSelector (Team project, co-built. Data preprocessing pipeline, scoring algorithm and RAG-based AI assistant for a tool, built as FastAPI microservices with a React frontend, that ranks cancer cell lines by target inclusion and exclusion genes and returns the evidence behind each pick, using per-gene scores across six evidence layers; validated and refined with feedback from AstraZeneca scientists.) GitHub: https://github.com/Arishtanemi4/az-team25.git | Demo: http://celllineselector-frontend-408937187029.s3-website.eu-west-2.amazonaws.com/
- **University of Bristol MSc Applied Data Science Group Project:** VisionCaptioner (Team project. Architecture study comparing CNN/ViT/ResNet encoders with symbolic, SBERT embedding-retrieval and LSTM sequence decoders (with and without Bahdanau attention) for generating image descriptions, trained with Adam over five seeds, scored with SBERT cosine similarity, BLEU and ROUGE-L and benchmarked against BLIP/SigLIP and commercial VLMs.) GitHub: https://github.com/Arishtanemi4/ata-team30.git
- **Wingman:** AI dating-coach web app with 108 LLM personas across 12 archetypes and a vision model scoring uploaded photos (ReactJS, Python FastAPI, Kimi K2 and DeepSeek V4 Pro via NVIDIA NIM). LLM output treated as untrusted: validated with Pydantic, repaired and cached by input hash; rate limits shaped the design (12 calls instead of 108, serialised calls, results streamed to the UI). GitHub: https://github.com/Arishtanemi4/wingman.git
- **Swindon Borough Council Fuel-Poverty Hack:** A household and neighborhood-based fuel poverty data analysis tool. (Made for the Swindon Borough Council Fuel Poverty Hackathon.) | GitHub: https://github.com/Arishtanemi4/fuel-poverty.git

ACHIEVEMENTS

- **Project Hack 27**: Rolls Royce Derby 4th Place winner. (Human Centric Data Analytics tool to predict the competition winner based on human wellbeing and psychological temperament survey data.) | GitHub: https://github.com/Arishtanemi4/team-4b.git
- **Encode Vibe Coding Hackathon:** Codeplain.ai track 2nd place winner. (Wingman.ai – An AI powered dating app simulation using codeplain's spec-driven framework) | GitHub: https://github.com/Arishtanemi4/wingman-codeplain.git
- **University of Bristol Datathon sponsored by Lloyd's Bank:** 3rd Place winner. (Kaggle Credit card fraud detection problem.)

SKILLS

- **Tools:** Docker, Jenkins, GitLab (CI/CD), AWS (EC2 including a GPU instance, S3, ECR, Lambda, EventBridge, SageMaker), Azure OpenAI, LlamaIndex, Nginx, Linux, LDAP, Power BI, VS Code, Claude Code.
- **Languages:** Python (pandas, scikit-learn, FastAPI, Pydantic, uvicorn), SQL, R (dplyr, tidyverse, ggplot2), JavaScript/TypeScript (NodeJS express, ReactJS), Shell
- **Databases:** PostgreSQL (pgvector semantic search, SQL functions and procedures), SQLite
