AI Engineer Opportunity | Production AI, Digital Twins | £80,000

6 messages

Lucy Orpwood <lucy.orpwood@aventumgroup.com> Mon, Oct 19, 2026 at 5:02 PM

To: "ksstubh.sonawane@gmail.com" <ksstubh.sonawane@gmail.com>

Afternoon Kaustubh,

Thank you for your application. Please see the attached documents and information for you to review.

Aventum | Dare to Discover, Home | Rokstone Underwriting, Home | Consilium

I'm currently recruiting for an **AI Engineer** opportunity and thought your background may be of interest. This role is focused on designing, implementing, and productionising advanced behavioural learning systems that integrate directly into digital products and workflows. You'll play a key role in building AI-driven decision engines, Digital Twin technologies, and intelligent automation solutions, working closely with software engineers, ML engineers, and product teams to take models from concept through to live production environments.

Role Accountable

- Designing and deploying AI models that power real-world decision-making and automation.
- Building end-to-end AI pipelines covering data ingestion, feature engineering, model training, deployment, monitoring, and optimisation.
- Developing behavioural and sequential models, including sequence prediction, intent modelling, imitation learning, and decision-process modelling.
- Applying causal inference techniques to measure the impact of AI-driven decisions and support product improvements.
- Integrating AI capabilities into platforms through APIs, microservices, and event-driven architectures.
- Supporting the development of Digital Twins and agentic AI systems through behavioural modelling and state-based decision frameworks.

- Validating and monitoring models using A/B testing, simulation environments, shadow deployments, and offline replay methodologies.
- Contributing to engineering best practices around testing, CI/CD, model lifecycle management, scalability, and observability.

Role Requirements

- Strong experience in Python and machine learning frameworks such as PyTorch or TensorFlow.
- A proven track record of deploying AI and machine learning solutions into production environments, rather than purely research or experimental settings.
- Experience working with sequence and decision-based models, including LSTMs, Transformers, Markov Models, reinforcement learning-inspired approaches, or similar technologies.
- Familiarity with behavioural modelling concepts such as imitation learning, behavioural cloning, intent modelling, or decision-process modelling.
- Hands-on experience with causal inference methodologies and tools such as DoWhy, EconML, or CausalML.
- Experience building AI services, APIs, orchestration frameworks, pipelines, and scalable systems.
- Strong software engineering fundamentals and the ability to balance technical innovation with commercial delivery requirements.
- Excellent problem-solving skills and the ability to rapidly iterate from prototype to production.

Additional information
Location: Monument, London
Hybrid Working: 3 days per week in the office
Hours: 8:30am – 5pm

Salary: Up to £80,000

If this sounds like something you'd be interested in discussing, please let me know so we can arrange a call. I look forward to hearing from you!

Lucy Orpwood
Talent Attraction Partner

Hi Lucy,

Thanks for considering me for the interview. Yes, I am interested in the opportunity.
I am available this week on Friday 23rd October.

If not then next week Tuesday 27th works as well.

Incase there are any other available slots do let me know. I will see if can be available.

Thanks and Regards,
Kaustubh Sonawane.
