STATEMENT

Data Engineer with **3 years** of industry experience building an **investment data platform** at an asset manager: designed the **normalized PostgreSQL schema**, ingested **Morningstar** data for every Indian mutual fund and integrated it with legacy analyst data, taking datasets from ingestion through to consumption by analysts and business users. Strong **SQL** (functions, procedures, query optimization) and **Python** pipelines, working directly with **investment** stakeholders; **MSc in Data Science at the University of Bristol** (awaiting result). Seeking an **Investment Data Engineer** role in **Private Markets Data & Analytics**, bringing relational database design experience from **PostgreSQL** to **SQL Server**.

EDUCATION

University of Bristol – MSc. Data Science (awaiting result) September 2025 – September 2026
NMIMS B.Tech Information Technology (Dual Degree) June 2017 – April 2022
NMIMS MBA Technology Management (Dual Degree) June 2017 – April 2022

WORK EXPERIENCE

HDFC Asset Management Company Ltd. July 2022 – July 2025

AI Solutions Engineer / Forward Deployed Engineer

Investment Data Platform & Integration

- Designed the entire **Normalized SQL Schema** (**PostgreSQL**) for the internal analytics platform to the analysts' requirements and wrote **Python** ingestion scripts for the enterprise-licensed **Morningstar API**, covering every fund in the Indian mutual fund market (2023–2025), refreshed fortnightly (fixed income) and monthly (equity).
- **Integrated** the new Morningstar data with the **legacy data** the company already held in analysts' Excel files, giving a much richer dataset; developed **Optimized SQL** queries for data preprocessing and **SQL Functions** and **Procedures** for efficient data insertion.
- Built a **Python** pipeline that parses over **300 daily emails** from credit rating agencies (**AWS Textract**, later **Azure OpenAI** when one agency switched to image emails), fuzzy-matches them to the companies analysts track and sends a consolidated daily email plus an **Excel** file in **S3**, saving **60 manual analyst hours a month**; scheduled with **EventBridge** and **Lambda** on **AWS SageMaker**.

Analytics, Consumption & Stakeholder Delivery

- Developed **Power BI** dashboards for the investment team's fortnightly credit report analysis, moving analysts from Excel and improving efficiency by **10 hours a week**; recreated them in the **ReactJS** frontend so the whole organization could use the data at lower cost than Power BI licences.
- Analyzed customer data with **Python Pandas** and identified buying patterns using **Market Basket Analysis** (**Apriori Algorithm**), handing the insights to the marketing team.
- Built **GenAI** applications on the same data (**Python FastAPI** microservices, **LlamaIndex**, **Azure OpenAI**, **pgvector**), where Python functions run **SQL** queries to fetch fund data for fund-house and fund-performance comparison.
- Worked directly with **Investment, Compliance and Client Service** stakeholders to turn requirements into working tools; **de facto team lead for up to 4 interns**; **Best Team Project** twice (2024 rating-email automation, 2025 department RAG chatbot).

Cloud Infrastructure, Security & Deployment

- Designed the infrastructure architecture for the analytics platform and GenAI applications on **AWS** (**EC2, S3, ECR, Lambda**), packaged services as **Docker** containers and automated deployment of separate frontend and backend repositories (dev and prod) through a one-click **Jenkins and GitLab CI/CD** pipeline.
- Implemented **RBAC** with **LDAP** authentication, restricted access to company private IPs with **AWS Security Groups**, and deployed an **Nginx** reverse proxy as one of the fixes that took the application through the security team's **VAPT**.

PROJECTS

- **University of Bristol MSc. Data Science Dissertation in partnership with AstraZeneca:** CellLineSelector (Team project, co-built. My focus: the **data preprocessing pipeline** that reads 17 raw inputs and builds 14 clean, joined tables with identity resolution across **DepMap, GEO and HPA** sources, duplicate and missingness handling, integrity checks and a build manifest audit file; the **scoring and ranking algorithm**; and the **RAG-based AI assistant**. Refined with feedback from AstraZeneca scientists.) GitHub: https://github.com/Arishtanemi4/az-team25.git | Demo: http://celllineselector-frontend-408937187029.s3-website.eu-west-2.amazonaws.com/
- **Swindon Borough Council Fuel-Poverty Hack:** household and neighborhood-based fuel poverty data analysis tool. GitHub: https://github.com/Arishtanemi4/fuel-poverty.git

ACHIEVEMENTS

- **University of Bristol Datathon sponsored by Lloyd's Bank:** 3rd Place winner. (Kaggle credit card fraud detection problem.)
- **Project Hack 27**: Rolls Royce Derby 4th Place winner. (Human Centric Data Analytics tool to predict the competition winner based on human wellbeing and psychological temperament survey data.) | GitHub: https://github.com/Arishtanemi4/team-4b.git
- **Encode Vibe Coding Hackathon:** Codeplain.ai track 2nd place winner. (Wingman.ai – An AI powered dating app simulation using codeplain's spec-driven framework for AI-assisted coding) | GitHub: https://github.com/Arishtanemi4/wingman-codeplain.git

SKILLS

- **Tools:** Jupyter, Anaconda, AWS (EC2, S3, ECR, Lambda, SageMaker, EventBridge, Textract), Azure OpenAI, Power BI, Docker, Jenkins, GitLab, Git, Nginx, Linux, LDAP, VS Code, Claude Code.
- **Languages:** Python (pandas, FastAPI, scikit-learn, fuzzywuzzy), SQL, R (dplyr, tidyverse, ggplot2), Shell, NodeJS, ReactJS.
- **Databases:** PostgreSQL (normalized schema design, SQL functions and procedures, query optimization, pgvector), SQLite.
